**Objet :** Migration of the ALERT-C location table version in France

**PJ :**

Road information can be delivered through different communication means. Relevant and accurate information needs an accurate description and location for each event.

The ALERT-C location tables can be considered as a geographical reference data framework. They are the only harmonised location referencing system throughout Europe able to locate each traffic event on road networks. Table creation is defined by a European standard as well as an international standard (EN ISO 14819-3:2004). As any reference data framework the ALERT-C location tables need to be regularly updated to take into consideration road network evolution. The last version (V11.0) of the Alert-C table was certified by the organization Tisa (Traveller Information Services Association) on September 24th, 2015.

These tables are used in different software components of road information systems especially in DATEX nodes inside the French ministry in charge of transports as well as in its partners' systems. It is convenient to organise a smooth version migration so as to avoid any data loss or service disruption.

Therefore, the current version (10.1) is scheduled to be shifted into the new one (11.0) on Wednesday, May 3, 2017 at 14:00 by the French ministry.

(... /...)

The new version of the table is available for free at : <http://diffusion-numerique.info-routiere.i2/tables-alert-c-a4.html>. For more information, please contact us at this address : diffusion-numerique@info-routiere.gouv.fr.

Yours faithfully,

Head of the Road Information and Information Systems Unit

  
**Le chargé du bureau de l'information routière  
et des systèmes d'information**

**Dominique LEROUVILLE**
